Australian Media History Database

(AMHD)

The Australian Media History Database is a portal for all aspects of research into the history of the media in Australia.

The AMHD has two components:

- A database of researchers working on projects on the history of Australian newspapers, magazines, radio, television, film, advertising, music and games.

- Listings of research resources across Australia and internationally, including libraries, archives, indexes, professional associations, courses and events.

Launched by the ARC Cultural Research Network in 2005, the AMHD was moved to the Centre for Media History at Macquarie University in 2011. It is the digital home of the Australian Newspaper History Group and a member of the Humanities Networked Infrastructure (huni.net.au) virtual laboratory.

Media Archives Project

(MAP)

The Media Archives Project Database is a register of lesser-known archives for all types of mass media. It is an essential resource for researching Australia's media history.

Launched by the Centre for Media History at Macquarie University in 2012, it covers newspapers, magazines, radio, television and advertising.

The MAP Database provides summaries of print and broadcast media archives in private hands across Australia, from companies and peak bodies to community groups and individual practitioners' homes.

It provides a keyword-searchable summary of each archive and information for researchers on how to arrange access to the material. The MAP Database is also part of the Humanities Networked Infrastructure (huni.net.au) virtual laboratory.
