Research Colloquium

We would like to invite you to a Research colloquium on March 6 at 1 pm in 29WW251. Dr. Karin Landerl will give a presentation on:

**Typical and atypical development of numerical processing**

**About the presenter:**

Dr Karin Landerl is a Professor of Developmental Psychology at University of Graz. She is a world-renowned expert on both literacy and numeracy development with publications in most leading journals in the field. Her most recent book examines dyscalculia.

**Dr. Karin Landerl**

**Abstract**

Numerical processing skills have been identified as a core mechanism of arithmetic development and deficits in the domain of numerical processing are strongly associated with dyscalculia. Evidence from longitudinal studies of numerical development in primary-school children with typical development and dyscalculia will be presented and discussed in a developmental framework.
