

Are you wearing hearing aids?

Join our research study –

Listening Effort in Hearing Aids

Aim of study: to investigate whether the advanced features of a hearing aid can help reduce the effort required in daily conversations.

We are seeking adult participants

- aged 18-80 with English as the first language;
- having moderate to moderately severe hearing loss in both ears;
- wearing hearing aids on both ears for at least 18 months and
- normal or corrected-to-normal vision.

What is involved?

- 1st appointment – Test your hearing, and complete some memory and reading tasks
- 2nd appointment – To be fitted with new hearing aids to trial for 4-6 weeks
- 3rd appointment – Return for a speech-in-noise listening task while monitoring brain waves with EEG

All appointments are conducted at the Australian Hearing Hub. You will receive \$175 at the end in appreciation of your time.
